

SOLAR KOTE®

Acrylic Capstock for Vinyl Fencing

Now, cap your fence with
durable, purebred colors.

SOLARKOTE®

Acrylic Capstock for Vinyl Fencing

When capped with Solarkote acrylic, vinyl fencing offers greater durability than wooden fencing, without the maintenance.

Now your customers don't have to mend fences.

As the market moves away from wooden fences with their high maintenance requirements, vinyl fences are gaining popularity. However, in more UV-sensitive regions like the southwest, white vinyl fencing can experience appearance failure in as little as one year.

Solarkote acrylic capstock will eliminate the problem. One thin coat coextruded over the vinyl fence offers a very cost-effective solution. Solarkote also gives your fence the option of color!

A wide variety of light to medium colors with excellent UV-resistance can be formulated right into the capstock. So you can deliver a beautiful, very durable product, in white or color.

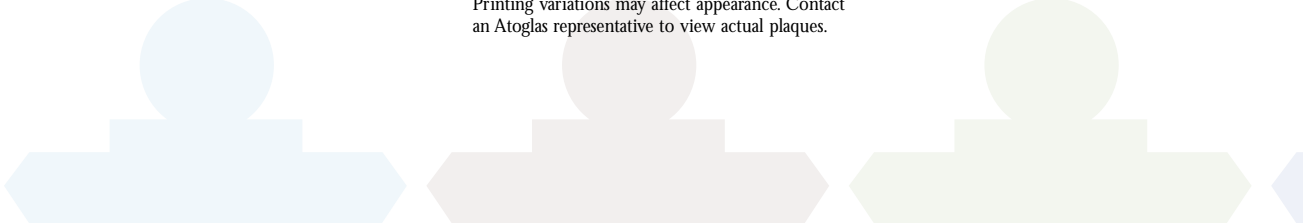

Documented in field exposure studies (see below), Solarkote delivers a virtually maintenance-free appearance year after year.

Southwest Exposure Studies

PVC				
ASA/PVC				
Solarkote PB/PVC				
	Initial	1 Year	2 Years	3 Years

A Solarkote PB/PVC combination offers greater resistance to color fading and UV-degradation than ASA/PVC or PVC alone.

Printing variations may affect appearance. Contact an Atoglas representative to view actual plaques.

Cap it off with added
weatherability and a
Kote of Many Colors.

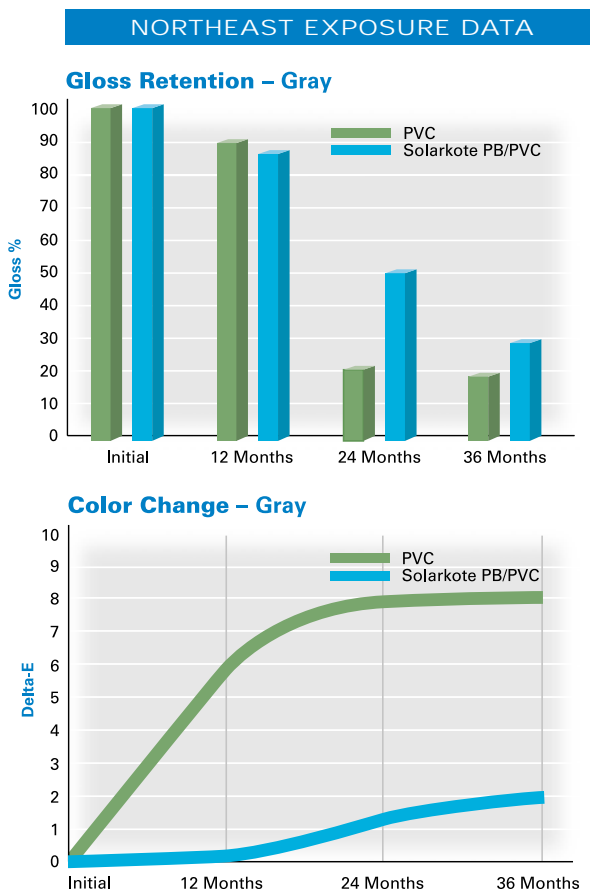

Blend privacy with natural beauty. Vinyl fencing with Solarkote capstock offers limitless possibilities.

Their own private worlds, in color.

Solarkote capstock gives you unlimited design freedom for privacy fence color schemes. Used in a coextruded cap over vinyl, many medium colors are possible — including gray, beige and blue — that are ideal for privacy applications. Colored privacy fencing can add distinction and help enhance property values.

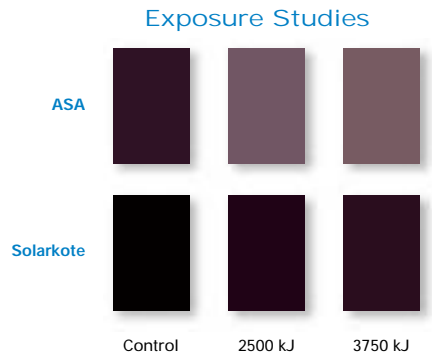

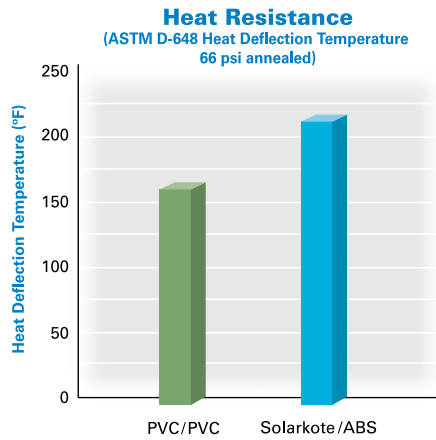

In a recent long-term exposure study, Solarkote outperformed traditional vinyl fence products by a significant margin. This equates to excellent surface finish and years of beauty.

Bringing new fashion to fencing.

Don't fear the dark colors on ornamental fences anymore. Just coextrude a thin layer of Solarkote all acrylic capstock over heat-resistant, high impact ABS or other high temperature polymers.

The Solarkote cap can withstand exposure to harsh UV and high heat environments as in the southwest. Even colors like hunter green and black will last for years while maintaining their beautiful surface finish.

Solarkote all acrylic capstock gives even the darkest colored fences a more elegant, fade-resistant surface.
