

Plexiglas® Arena

CELL CAST ACRYLIC SHEET

Plexiglas® Arena acrylic sheet is designed specifically for indoor arena glazing. It is made via the Plexiglas® acrylic sheet cell cast process, which allows for superior optical properties using state of the art acrylic sheet manufacturing technology. Plexiglas® Arena acrylic sheet does not shatter like glass when broken. It is half the weight of tempered glass, which allows for quicker and easier change-outs if needed.

Plexiglas® Arena acrylic sheet is available in two thicknesses, full gauge 0.625" for the highest energy impact zone behind the goal area, and full gauge 0.500" for the sides of the arena.

PLEXIGLAS®
BY ARKEMA

- **Conforms to ASTM F-1703 for Hockey Rink Glazing**
- **Exceptional Optical Clarity**
- **Little to no low angle distortion**
- **Lightweight - Half the weight of glass**
- **Fabricates just like standard cell cast acrylic**
